

Lab-6

Use HTML+PHP to create front-end for mysql queries.

1. Create a login page with welcome message and Login credentials.
2. Import tables used in LAB-2 using lab2.sql file.
3. Connect login with EMP table and allow access to every employee in EMP table.
4. Display the list of employees in the form of a table on a button click.
5. Create webpages to Insert records in EMP and DEPT table.
6. Create webpages to Delete records in EMP and DEPT table.
7. Create webpages to Update records in EMP and DEPT table.
8. Provide GUI elements (preferably a button and input box) that allows a user to look for employee details after being triggered (a click in case of a button).
